

How to set up your Google account with two-step authentication

Signing in with 2-step verification

Signing in will be different

You'll need verification codes:
After entering your password, you'll enter a code that you'll get via text, voice call, or our mobile app.

Keep it simple

Once per computer, or every time:
During sign in, you can tell us not to ask for a code again on that *particular computer*.

Help keep others out

You'll still be covered:
We'll ask for codes when you (or anyone else) tries to sign in to your account from *other computers*.

2-step verification

Keep the bad guys out of your account by using both your password *and* your phone.

Set up your phone

Which phone should we send codes to?

Google will send a numeric code to your phone whenever you sign in from an untrusted computer or device.

Phone number ex. 01812-345678

- Google will only use this number for account security.
- Message and data rates may apply.

How should we send you codes?

- ☒ Text message (SMS)
☐ Voice Call

[« Back](#)

[Send code](#)

Verify your phone

We sent a text message to [redacted] with a code

Enter verification code

Verification codes are 6 digits long.

[Verify](#)

[Didn't get the code?](#)

Trust this computer?

1 — 2 — 3 — 4

Trusted computers only ask for verification codes once every 30 days.

If you lose your phone, you might be able to access your account from a trusted computer without needing a code. We recommend that you make this a trusted computer only if you trust the people who have access to it.

☒ **Trust this computer**
You can always change which computers you trust in your Google Account settings.

Confirm

1 — 2 — 3 — 4

Turn on 2-step verification

You'll only be asked for a code whenever you sign in using your account every 30 days, on each trusted computer or device.

If you lose your phone, you can always change it in account settings.

The Google Apps SLA (Service Level Agreement) does not apply to any services that are used in connection with 2-step verification, if the verification process relies on third-party voice or data providers to deliver the verification code. Details of the agreement are available [here](#).

As such, Google's experience with two-step authentication makes it a remarkably simple process to set up. Here's what you need to do.

1. First login to your email
2. Then click Account setting
3. Then click 2 step verification
4. Click on **Get Started**.

5. Click the **Start setup** button.
6. Add a phone number that Google can send the six-digit verification code to.
7. Verify your phone number by entering in the six-digit code Google sent you.
8. Choose whether or not to add your current computer as a trusted device.
9. Confirm that you wish to turn on two-step verification.

And you're set! Google will now send your phone a six-digit code for any app that uses Google's web interface to authenticate your account.
